EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Jeff Nelson on 5/22/2007.

The application has been amended as follows:

IN THE CLAIMS

Claim 1:

In line 7, - "(b) applying a high frequency signal to the plates:" - has been changed to "(b) applying a high frequency signal to at least one of the plates:".

Claim 10:

In line 8, delete "the sensor plate and to".

In lines 11-14, replace all of step c with "(c) applying a signal induced on the sensor plate by the high frequency signal and the high frequency signal to control a voltage gain of an amplifier in the circuit, said applied signal induced by the high frequency signal being indicative of the medium;"

In lines 18 and 19, insert "induced by the high frequency signal" between "the applied signal" (line 18) and "and the high frequency signal." (line 19).

Claim 14:

In line 2, - -“applying the signal from the sensor plate” has been changed to “applying the applied signal induced on the sensor plate”.

Claims 18-23 have been cancelled.

Claim 24:

In line 7, - - “(b) applying a high frequency signal to the plates and a dielectric of the” has been changed to “(b) applying a high frequency signal to at least one of the plates and a dielectric of the”.

Claim 28:

In line 6, - -“(b) applying a high frequency signal to the plates;”- - has been changed to “(b) applying a high frequency signal to at least one of the plates;”.

2. The following is an examiner’s statement of reasons for allowance:

Claims 1, 10, 24 and 28 are allowable over the art of record because the prior art does not teach or render obvious the entire combination including specifically a method for measurement using a capacitive sensor comprising applying a high frequency signal

and a signal from a sensor plate to control a voltage gain of an amplifier in the circuit, and differentiating an output of the amplifier and the high frequency signal.

Claims 2-9 are allowable as they depend from claim 1.

Claims 11-17 are allowable as they depend from claim 10.

Claims 25-27 are allowable as they depend from claim 24.

Claims 29-40 are allowable as they depend from claim 28.
